

True and Micro Markets

Food safety is of the utmost importance for your customers.

True's Health Safety Timer allows you to sell refrigerated and frozen product in different applications from a self contained refrigerator or freezer. Should temperatures rise above food safe standards, the mechanism triggers a lock on the door preventing further sales of the product.

GDM-23-HC-HST-TSL02

TUC-27G-HST-FGD01

Electronic monitoring system deploys lock if unsafe temperatures last longer than the allotted time.

41°F (5°C) for 30 minutes or longer in refrigerators.
0°F (-18°C) for 30 minutes or longer in freezers.

Battery backup power supply ensures the lock will continue to function even if the unit loses power.

Auditory alarm sounds (GDM models only), along with a visual signal display when lock is triggered to inform staff.
